# Summary

This Development Servicing Plan (DSP) covers water supply developer charges for the Tamworth Regional Council Local Government Area. Sewerage developer charges are covered under a separate DSP.

This DSP has been prepared in accordance with the 2016 Developer Charges Guidelines for Water Supply, Sewerage and Stormwater issued by the Minister for Lands and Water, pursuant to section 306 (3) of the *Water Management Act, 2000.*

The area covered by each DSP, and the existing works serving the area, are shown on the plans in Section 12. The timing and expenditure for works serving the area covered by each DSP are shown in Section 4. Levels of service to be provided in each DSP area are summarised in Section 5.

The water supply developer charges for the areas covered by this DSP document have been determined as follows:

| DSP Name | Developer Charge ($ per ET) | Cross-subsidy: resulting increase in the Typical Residential Bill |
|---|---|---|
| Arcadia | $8,501 | 3.46% |
| Attunga | $500 | |
| Barraba | $500 | |
| Bendemeer | $500 | |
| Hills Plain | $11,176 | |
| Manilla | $500 | |
| Nundle | $500 | |
| Tamworth* | $3,768 | |

(* includes Moonbi & Kootingal)

Developer charges relating to this DSP will be reviewed after a period of 4 to 8 years, in accordance with the guidelines. In the period between any review, developer charges will be adjusted annually on the basis of the movements in the CPI for Sydney, excluding the impact of GST.

The developer shall be responsible for the full cost of the design and construction of water supply reticulation works within subdivisions.

Background information containing all the critical data including calculation models behind each DSP is available on request.

# 1 Introduction

Section 64 of the *Local Government Act, 1993* enables a local government council to levy developer charges for water supply, sewerage and stormwater. This derives from a cross-reference in that Act to Section 306 of the *Water Management Act 2000.*

A Development Servicing Plan (DSP) details the water supply, sewerage and/or stormwater developer charges to be levied on development areas utilising a water utility's water supply, sewerage and/or stormwater infrastructure.

This DSP covers water supply developer charges for areas served by Tamworth Regional Council (TRC). A separate DSP has been prepared to cover sewerage developer charges.

This DSP has been prepared in accordance with the 2016 Developer Charges Guidelines for Water Supply, Sewerage and Stormwater issued by the Minister for Lands and Water, pursuant to section 306 (3) of the *Water Management Act, 2000.*

This DSP document supersedes any other requirements related to water supply developer charges for the areas covered by this DSP. This DSP takes precedence over any of Council's code or policies where there are any inconsistences relating to water supply developer charges.

# 2 Administration

## 2.1 DSP Name and Area Covered

The basis for defining the DSP area boundaries is the existing and future development served by the TRC water supply schemes. Separate DSPs have been prepared for the towns with separate water supply schemes and for development areas of over 500 lots. A summary of the DSP areas is provided in Table 2-1.

*Table 2-1 Summary of DSP Areas*

| Arcadia | The area covered by this DSP is shown on Plan 6. The basis for defining the DSP boundaries is a development area over 500 lots |
| Attunga | The area covered by this DSP is shown on Plan 1. The basis for defining the DSP boundaries is an area serviced by a separate water supply scheme |
| Barraba | The area covered by this DSP is shown on Plan 2. The basis for defining the DSP boundaries is an area serviced by a separate water supply scheme |

## 2.2 Payment of Developer Charges

Developer charges will be determined and levied in accordance with the provisions of this DSP document at the time of considering an application for a compliance certificate under Section 305 of the *Water Management Act 2000* or a construction certificate under section 109 of the *Environmental Planning and Assessment Act 1979* or at the time of issuing a notice or other form of written advice, e.g. Under the *SEPP (Exempt and Complying Development Codes) 2008*. The time limit for payment of developer charges will be included in the notice of determination or will be advised to the developer by a separate notice. The amount of any developer charges not paid within the specified time limit will lapse. Any subsequent determination of developer charges will be made in accordance with Council's then current DSP.

## 2.3 Dispute Resolution

Disputes will be resolved in accordance with Section 2.9 of the Guidelines. TRC is not a member of the Electricity and Water Ombudsman (EWON).

# 3 Demographic and Land Use Planning Information

## 3.3 Land Use Information

This DSP document should be read in conjunction with the Tamworth Regional Local Environmental Plan (LEP) 2010.

# 4 Water Supply Infrastructure

TRC operates and maintains six water supply schemes. A brief description of these schemes is provided in the following sections.

## Attunga

The water supply scheme in Attunga supplies water to approximately 300 residents. It consists of approximately 3.6 km of reticulation mains with water being supplied from two bores and submersible pumps located adjacent the Peel River. Water is treated via chlorination at the inlet side of the town's single reservoir.

## Barraba

The primary source of water for Barraba is Split Rock Dam, which is owned and operated by Water NSW. TRC own and operate a high lift pump station located at the dam which pumps raw water via a 15.7 km pipeline to a break pressure tank, and then gravitates via another 12 km of pipeline to the Barraba WTP.

The existing WTP was significantly upgraded in 2015 in order to reliably treat the water from Split Rock Dam, the quality of which can change suddenly and often contains high quantities of manganese and iron. The WTP pumps treated water directly to a 3.6 ML reservoir, which services the entire township.

## Bendemeer

The Bendemeer water supply system is sourced directly from the Macdonald River. The town has a water treatment plant, one reservoir and reticulation system to supply approximately 200 residents.

## Manilla

The Manilla water supply is currently sourced from the Namoi River weir with backup supply from the Split Rock Dam. The town has a water treatment plant, three reservoirs and a reticulation system that supplies approximately 2,080 residents.

The design of a new WTP and upgraded raw water supply system was completed in 201718 and construction is scheduled for 2018/19 – 2019/20. The water supply scheme will comprise a new 3.5 ML/d WTP, a new raw water pumping station on the Manilla River and an upgraded Naomi River raw water pumping station.

## Nundle

Nundle has a main bore on the Peel River supplemented by another bore in times of drought. Nundle has a water treatment plant, pump station, two reservoirs and reticulation system that supplies approximately 270 residents.

## Tamworth

The Tamworth water supply is sourced from both the Dungowan Dam and the Chaffey Dam. Water from both sources is treated at a water treatment plant located in Calala. Raw water from Dungowan Dam is delivered to the treatment plant via approximately 54 km of DN500/375 pipeline. Water from Chaffey Dam is delivered to Tamworth via controlled releases to the Peel River. The Peel River Intake pumping station extracts the raw water from the Peel River and delivers it to the Calala WTP.

There are six pumps installed at the water treatment plant. Three of these pumps deliver treated water to the One Tree Hill reservoirs, from which the area to the south of the Peel River is supplied. The remaining three pumps deliver treated water to the Victoria Park reservoirs, from which the area to the north of the Peel River is supplied. There are also a number of smaller reservoirs, pumping stations and high level tanks within the water supply system.

Until recently, Kootingal and Moonbi received their water supply from groundwater wells adjacent to the Cockburn River. The system has been permanently connected to the Tamworth water supply system since 2016 (previously the connection was an emergency supply only). Water is pumped to the twin reservoirs in Kootingal via a pump station in Nemingha and pipeline along Nemingha Road. A pumping station adjacent to the Kootingal twin reservoirs delivers water to the Moonbi Reservoir to service Moonbi.

The Arcadia and Hills Plain service areas are supplied from the Tamworth water supply system.

The existing water supply headworks and water supply distribution works servicing the area covered by this DSP are shown on Plans in Section 12.

## 4.1 Existing Capital Costs

The estimated MEERA capital cost of water supply capital works (including backlog works) servicing the areas covered by this DSP document are shown in Section 14. Note that only those assets constructed in the last 30 years are included in the capital charge calculation.

## 4.2 Future Capital Works Program

The timing and expenditure for water supply capital works (including backlog works) servicing the area covered by this DSP document are shown in Section 15.

## 4.3 Reticulation Works

The developer shall be responsible for the full cost of the design and construction of water supply reticulation works within subdivisions.

# 5 Levels of Service

System design and operation are based on providing the following levels of service (LOS). Typical levels of service are outlined below. Further information on levels of service is available from:

- TRC's Water Supply and Sewerage Strategic Business Plan (Hunter Water Australia, 2010);
- NSW Water and Sewerage Strategic Business Planning Guidelines, NSW Office of Water, July 2011, (available at www.water.nsw.gov.au).

Community consultation was undertaken on the current levels of service during the preparation of TRC's Water Supply Strategic Business Plan in 2010 in order to negotiate an appropriate balance between LOS and the resulting TRB.

The LOS that apply to TRC's water supply schemes are the targets that Council aims to meet. Achieving the target LOS is Council's primary objective however they are not intended as a formal customer contract. Council's current LOS for the Tamworth urban area are outlined in Table 5-1. Council's current LOS for towns and villages are outlined in Table 5-2.

# 6 Design Parameters

Investigation and design of water supply system components is based primarily on the Water Services Association of Australia “Water Supply Code of Australia WSA 03-2011 Version 3.1” with some modifications to reflect TRC’s Levels of Service criteria.

The following technical reports relate to the system components in this DSP document:

- Tamworth Water Supply Servicing Strategy (Final Draft, 2017)

## 7.2 Service Areas

The water supply service areas and the basis of determining the service areas are summarised in Table 7-2.

*Table 7-2 Basis of Determining Service Areas*

| Service Area | Basis of Determining the Service Area |
|---|---|
| Arcadia | New development area over 500 lots |
| Attunga | Separate small town or village |
| Barraba | Separate small town or village |
| Bendemeer | Separate small town or village |
| Hills Plain | New development area over 500 lots |
| Manilla | Separate small town or village |
| Nundle | Separate small town or village |
| Tamworth | Area serviced by a separate water supply distribution system |

## 7.3 Equivalent Tenements (ETs)

All new properties and properties with change in use which are subject to payment of water supply charges are liable for payment of developer charges for water supply. An ET is the basic unit to determine the demand that the development will place on the water supply system. One ET represents the equivalent

demand from a single, detached residential dwelling. TRC uses the NSW Water Directorate's Guidelines for Determining Water ET Figures.

Credit for existing use is applied in the calculation of the ET loadings, as the developer charges are levied for additional ET loading only. For example, the first lot in a residential subdivision is exempt from developer charges where the lot is already connected to the water supply system. Properties not already rated for water supply do not receive the one lot credit.

TRC's average annual residential water consumption is 230 kL/property/year although average consumption per property varies between the service areas. This volume is Council's average annual residential water to be supplied for a single detached residential dwelling and represents 1 ET. For each service area, the number of ETs to be served has been determined as the estimated annual water to be supplied to the service area divided by the volume of 1 ET. ET projections for each service area are shown in Table 7-3. The ETs in January 1996 are also provided.

*Table 7-3 ET Projections*

## 7.4 Capital Charge

The capital charge for each service area covered by this DSP document has been calculated using the NPV spreadsheet method.

Under the NPV spreadsheet method, the capital cost of relevant assets and projected ETs served in a service area are entered into a spreadsheet. These capital costs are only for the share of the asset capacity used in the service area. The PV of capital cost and the PV of new ETs are calculated, and the capital charge per ET is the PV of the capital cost divided by the PV of the ETs. A 3% discount rate was applied for pre-1996 infrastructure and a 5% discount rate was applied to post 1996 and future assets, in accordance with the DPI guidelines.

Calculation details for PV of ETs and PV of capital costs for each service area are shown in Section 16. The summary of the capital charge calculations is shown in Table 7-4.

## 7.6 Reduction Amount

TRC has adopted the NPV of Annual Bills method to calculate the Reduction Amount. This method involves calculation of the PV of the future net income, which is the difference between the revenue from annual bills, and annual OMA cost, projected for new development over the next 30 years. This is divided by the PV of the new ETs over 30 years to give the reduction amount. TRC has a single tariff structure for all towns and villages. The reduction amount calculations are shown in Table 7-7. The annual bill and OMA cost were obtained from the 2015/16 TBL Water Supply Performance Report as this was the most recent available data at the time of preparation of the DSP.

*Table 7-7 Calculation of the Reduction Amount*

Annual bill = $619 per ET
OMA Cost = $518 per ET
Net income = Annual bill – OMA cost = $101 per ET

## 7.7 Cross-Subsidy

The cross-subsidy is the difference (%) between the annual bill with the calculated maximum developer charge and the proposed lower developer charge.

LWUs may elect to cap the developer charges for small villages in order to maintain affordability and to avoid 'stranded' assets in such villages. LWUs may also cap other developer charges to maintain affordability, subject to adopting a commercial developer charge which recovers a significant proportion of the capital cost of the infrastructure. TRC has decided to apply a cross subsidy to reduce the developer charges in the small towns and villages to $500 so that development is not impeded in the small towns and villages by higher developer charges. TRC has also decided to apply a cross subsidy to reduce the developer charges in Hills Plain to 59% of the maximum developer charge. Tamworth and Arcadia developer charges will be set at the maximum developer charge. Kootingal and Moonbi, which are part of the Tamworth water supply system, will have the same developer charge as Tamworth.

The cross-subsidy, resulting from capping of developer charges must be disclosed in the DSP, the utility's Annual Report, Annual Operational Plan and in communication materials for consultation with stakeholders as noted above.

Two options were developed and examined as follows:

Option 1 – No cross subsidy – Calculated maximum developer charge

Option 2 – Cross subsidy - to reduce small towns and village charges to be equal to $500 (excluding Moonbi/Kootingal), and to reduce Hills Plain charges to 59% of the maximum developer charge – adopted.

A summary of the developer charges option and cross-subsidy is shown in Table 7-8.

Developer charges will be adjusted on 1 July each year on the basis of movements in the CPI for Sydney, in the preceding 12 months to December, excluding the impact of GST.

Developer charges will be reviewed by Council after a period of 4 to 8 years.
